Adding Fractions

$$1) \quad \frac{5}{10} + \frac{1}{2} = \frac{5}{10} + \frac{5}{10} = \frac{10}{10} = 1$$

$$2) \quad \frac{2}{4} + \frac{1}{2} = \frac{2}{4} + \frac{2}{4} = \frac{4}{4} = 1$$

$$3) \quad \frac{1}{2} + \frac{1}{5} = \frac{5}{10} + \frac{2}{10} = \frac{7}{10}$$

$$4) \quad \frac{2}{3} + \frac{9}{10} = \frac{20}{30} + \frac{27}{30} = \frac{47}{30} = 1 \frac{17}{30}$$

$$5) \quad \frac{1}{2} + \frac{3}{5} = \frac{5}{10} + \frac{6}{10} = \frac{11}{10} = 1 \frac{1}{10}$$

$$6) \quad \frac{1}{2} + \frac{2}{3} = \frac{3}{6} + \frac{4}{6} = \frac{7}{6} = 1 \frac{1}{6}$$

$$7) \quad \frac{4}{5} + \frac{1}{3} = \frac{12}{15} + \frac{5}{15} = \frac{17}{15} = 1 \frac{2}{15}$$

$$8) \quad \frac{1}{4} + \frac{2}{3} = \frac{3}{12} + \frac{8}{12} = \frac{11}{12}$$

$$9) \quad \frac{1}{2} + \frac{3}{4} = \frac{2}{4} + \frac{3}{4} = \frac{5}{4} = 1 \frac{1}{4}$$

$$10) \quad \frac{2}{3} + \frac{2}{4} = \frac{8}{12} + \frac{6}{12} = \frac{14}{12} = \frac{7}{6} = 1 \frac{1}{6}$$
